

AGGREGATE OIL

APPLICATION

AGGREGATE oil for lubricating moulds of steel, timber and plastic in the process of manufacturing elements from concrete (aggregate or cellular) – to prevent adhesion of the concrete mass to the mould and to protect steel moulds from corrosion.

ADVANTAGES

- Does not cause discoloration on the concrete surface
- If the oil is applied, the product separates easily from the mould while its surface remains smooth.
- Reduces formation of open bubbles or honeycombs on concrete surface after demoulding.

Parameters	AGGREGATE OIL
Kinematic viscosity at. 40°C, [mm ² /s]	20.2
Flash point, [°C]	140
Pour point, [°C]	-10
Notice: The above parameter values are typical. The actual values are to be found in the laboratory report attached to each batch of the product.	

ADDITIONAL INFORMATION

Chemnaft oils need to be stored in steel or polyethylene containers protecting the product from damp and mechanical impurities. Given the available knowledge, the product does not have an adverse impact on humans, if used properly. Safety information is to be found in the current material safety data sheet.
